

# AutoSim AS 1200

**Full size Car Driver Training & Research System**  
**With 3DOF or 6DOF Motion**

## Features and Programs

### General Features

- Real standard car
- 3 DOF Motion System
- Steering force feedback
- 200° round front screen
- Real dashboard in operation
- HiFi Sound System with 3D and Doppler Effect
- Top of the range PC's as well as the NVidia GTX Graphic Boards
- Networking ability to other AutoSim simulators.
- Outside and inside LCD mirrors
- Optional configuration with 180° flat screen
- SimWorld top range simulator software
- Automated evaluation of training scenarios
- Simulator debugging from AutoSim via Internet
- Driving vehicle types factory configurable on all relevant parameters (engine power, transmission, physics, etc.)
- Student communication is in the customer native language
- Graphic and voice controlled directing system
- Controllable from tablets and smart phones

### General contents in Training Programs

- Technical training.
- Braking and maneuvering on different road surfaces.
- Eco driving.
- Risky situations.
- Free driving with other traffic.
- Fire truck blue light driving.

The training program library is under continuous development in collaboration with customers

### Automated and student self-managed operation

The self-managed student system enables the student to use the simulator without supervision. The student manages the simulator using a small tablet logged on to the cabin network. The tablet displays the available exercises as prepared by the teacher. The student runs the exercises in order, or repeats them if he wants to or has been told to by the automated evaluation.

The teacher receives a full report afterwards.

The system can be delivered for the customer native language.
